## How to configure DLP policies in Power Platform

11:00 AM – 11:45 AM

### SPEAKERS PANEL

**Aakash Maurya**

Team Lead

# Imagine Problem Statement

- XYZ has its customer data such as Credit card information, personal identification information, business confidential data etc., stored in SharePoint lists/Dataverse/SQL Tables.
- XYZ is very serious about its data privacy and data security.
- XYZ realized that the company data is compromised.
- After a long investigation XYZ identified that data was compromised via PowerApps & Power Automates.
- One of the employee was sending data outside the organization by using Email connector.

# Action needed

- We need to provide solution to XYZ company to help them to protect their data from being shared outside the organization.

# Solution

# What is Data Loss Prevention (DLP) Policy

- DLP policies are simple packages that are collections of mail flow rules (also known as transport rules) that contain specific conditions, actions, and exceptions that filter messages and attachments based on their content

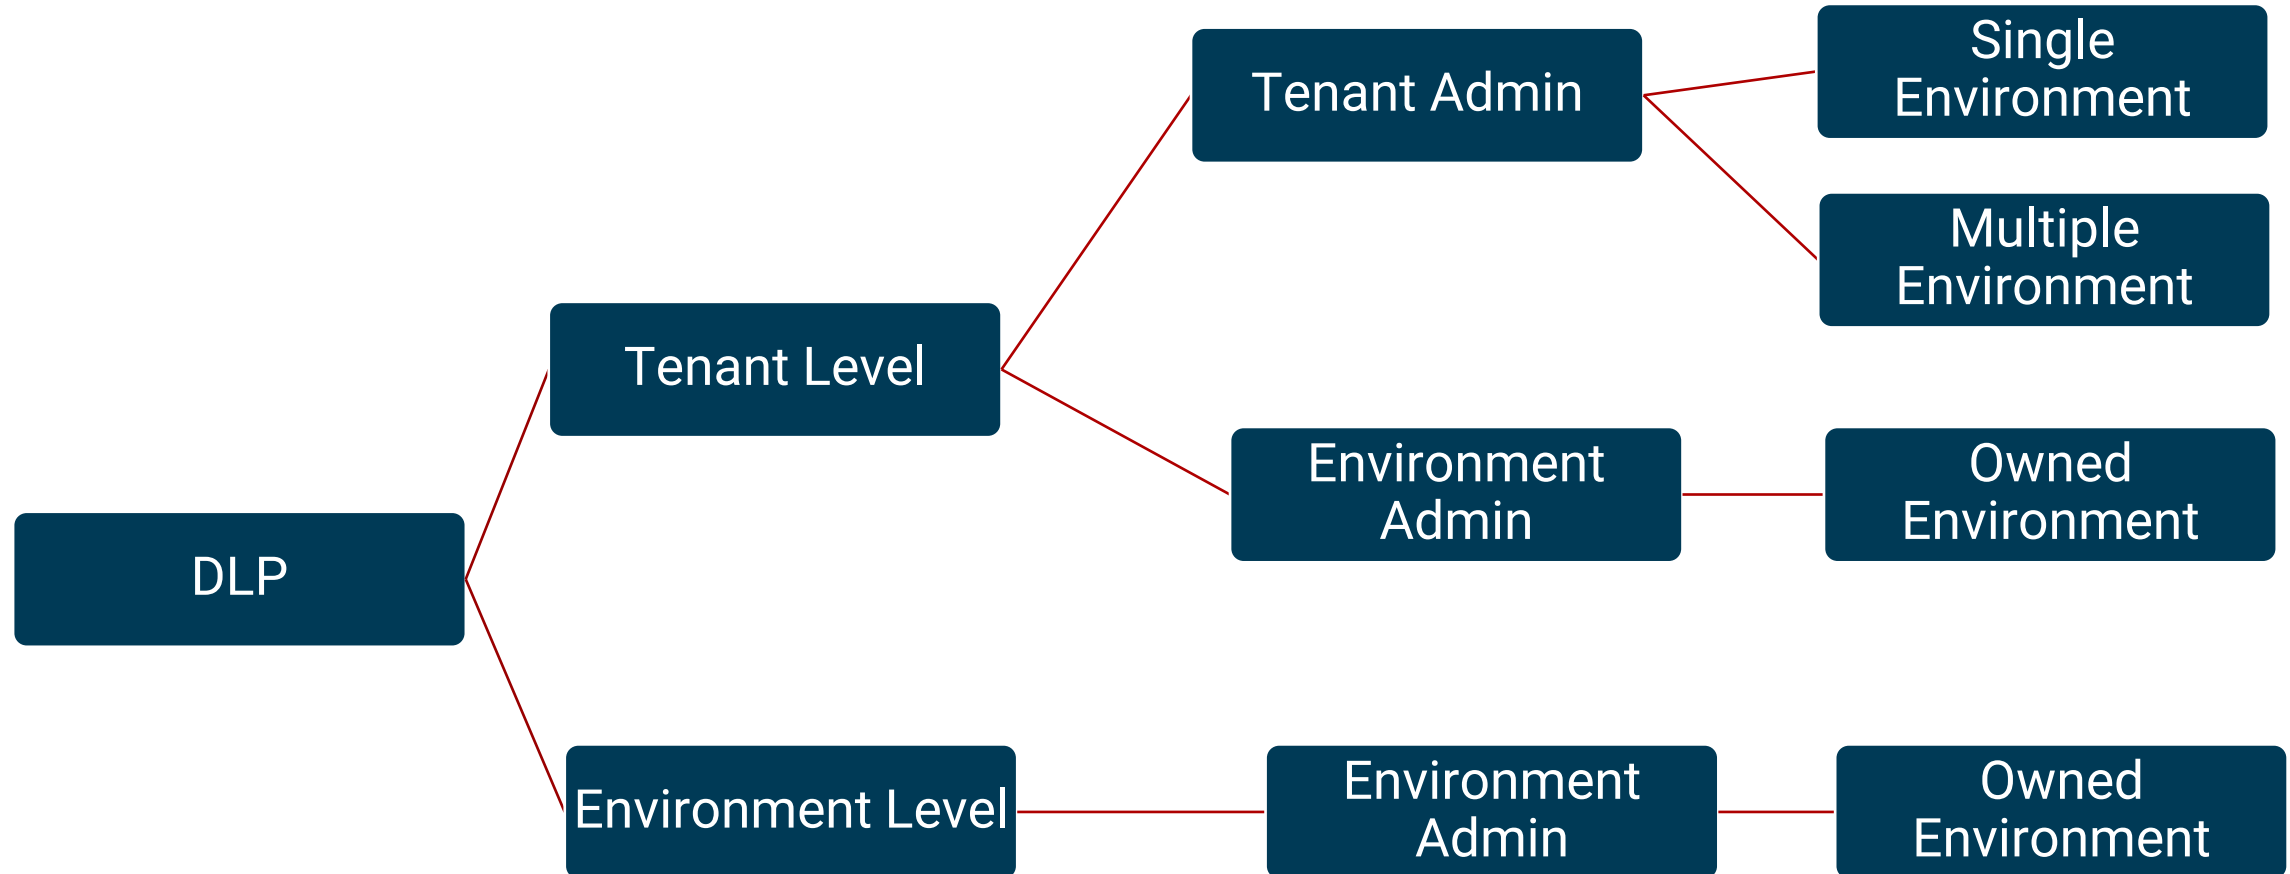

# Why DLP is used?

- Protect confidential data from being lost intentionally or unintentionally
- Secure mobile workforce and enforce security in Bring Your Own Device (BYOD) environments
- Secure data on remote cloud systems

# From where we can create DLP?

- Power Platform Admin Center

# Permission hierarchy

# DEMO

- Creating DLP Policy
- Editing DLP Policy
- Viewing DLP Policies
- Deleting DLP Policies

# Known Limitations

- Blocking the HTTP connector will also block child flows because those child flows are called using the same HTTP connector technology.
- If a child flow violates a DLP policy, it will not result in the parent flow becoming non-compliant.
- There's no support for cross checking the categories between a cloud flow and the desktop flows it calls. This will be supported when DLP for desktop flows is generally available

# Frequently Asked Questions

- Can environment admins edit policies created by the tenant admin?
  - No
- Can environment admins delete policies that were created by the tenant admin?
  - No
- Can environment-level DLP policies can override tenant-wide DLP policies?
  - No
- When I create new DLP policy, will it impact my existing Power Automates?
  - Yes, if your existing Power Automates is violating the DLP policy configured then your Power Automates will be automatically suspended by DLP background process
